

## Technology Stack

- ✓ HTML (Hypertext Markup Language): Used for creating the structure and content of web pages.
- ✓ CSS (Cascading Style Sheets): Used for styling and layout of web pages.

Version Control System: Git (a distributed version control system for tracking changes in the codebase.)

Code Hosting and Collaboration: GitHub (a web-based platform that provides hosting for Git repositories. It offers features like issue tracking, pull requests, and making it an excellent choice for collaborating with team members and managing the project's codebase.)
